An Invitation to the GRIPS Development Forum Seminar

Germany-Japan Partnership for “Quality Growth”
Sharing Experiences of Industrial Development Cooperation
in Partnership with the Private Sector

Organized by GRIPS Development Forum
Supported by JICA, HIDA and
Embassy of the Federal Republic of Germany, Tokyo

1. Objective

The main objective of this seminar is to introduce the approach and practices of German industrial development cooperation, by inviting leading experts from the German Corporation for International Cooperation (GIZ) and the German Confederation of Skilled Crafts (ZDH). Special attention will be paid to partnerships with the private sector, local governments and other industry-related institutions toward achieving “quality growth” in developing countries. This is a high-priority task in the current Japanese development cooperation and the globally agreed 2030 agenda for Sustainable Development.

The seminar also invites Japanese experts—the Japan-Thailand Economic Cooperation Society (JTECS), the Japan International Cooperation Agency (JICA), the Overseas Human Resource and Industrial Association (HIDA)—in the related area to share their perspectives and promote mutual learning.

2. Background and Key Issues

Germany and Japan have rich experiences in industrial development cooperation. The two countries are strongly manufacturing-oriented (monozukuri) and thus possess a wealth of human and institutional foundations for industrial support. Although it is only recent that the international community began giving attention to industrialization and economic transformation in the context of the Sustainable Development Goals (SDGs), Germany and Japan have been consistently engaged in this challenge for decades. Moreover, Germany and Japan have shared features in development cooperation—e.g., offering field-based concrete support to partner countries, taking a human-centered, capacity development approach. As such, two countries could play a distinctive role in realizing ‘quality growth’ in partner countries.

A notable strength of German industrial development cooperation is that implementing agencies have built close partnerships with industrial and business organizations (such as TVET centers, business associations and Chambers of Commerce, and regional governments). These organizations have accumulated hands-on expertise in the country’s industrial development, and thus could play a key role in technology transfer to and business matching with partners in developing countries. Such partnerships may also contribute to strengthening the domestic constituency for development cooperation and forging mutually beneficial economic relationships with partner countries.

As Japan enters into a new era of development cooperation—with the Development Cooperation Charter (formulated in early 2015) and the initiation of the SDGs (from 2016), it is quite important and valuable to learn German approach to industrial development cooperation and share mutual experiences to realize ‘quality growth’ in partner countries.
### Speakers' Profile

| **Mr. Thomas Rolf** | Mr. Thomas Rolf is Product Development Senior Manager at GIZ. For GIZ he also worked as Programme Manager in Private Sector Development for eight years in Egypt & Ethiopia and was previously involved in different positions in strategy consulting in Manila, Rio de Janeiro, Frankfurt & Düsseldorf. In Manila, he was Manager Business Development in Chamber of Commerce in Philippines and researched strategy & market, also developed network with partners.
